Not having a test set might be okay. (Only dev set.)

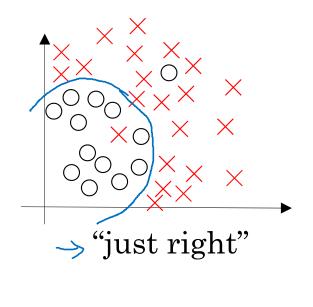

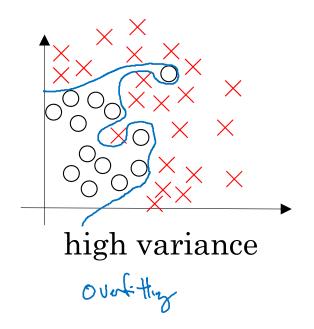

Setting up your ML application

Bias/Variance

Bias and Variance

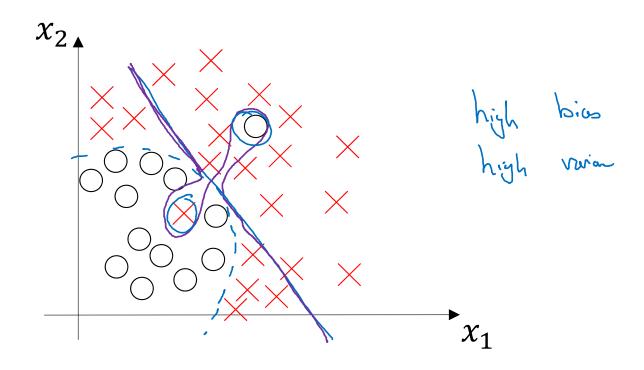

Bias and Variance 4=1 5-0 Cat classification

Optul (Bayes) error : 1/8%. 15%. Blury images

High bias and high variance

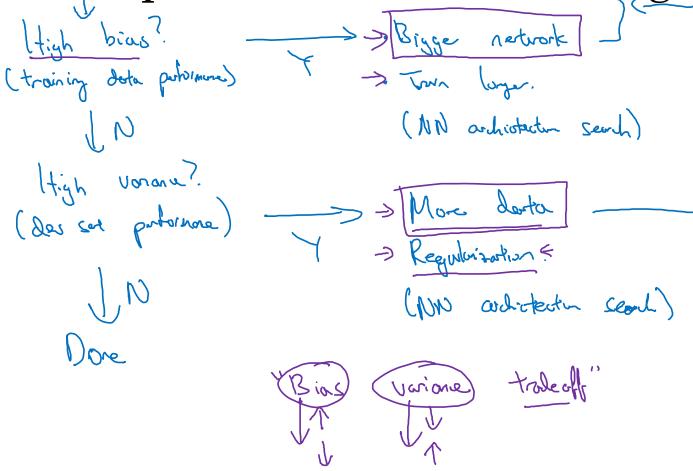

Setting up your ML application

Basic "recipe" for machine learning

Basic recipe for machine learning

Regularizing your neural network

Regularization

Logistic regression

$$\min_{w,b} J(w,b)$$

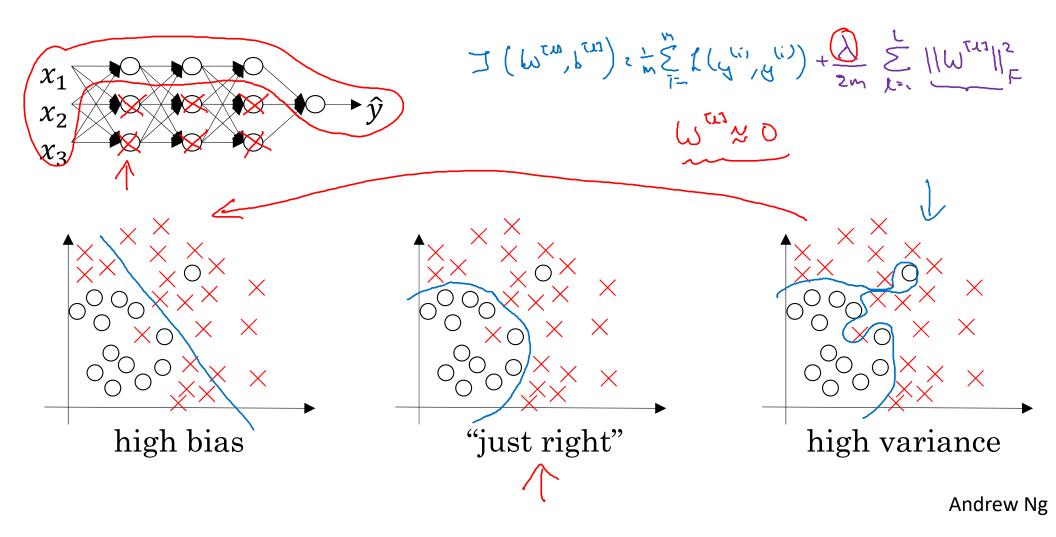

$$\lim_{w,b} J(w,b) = \lim_{n \to \infty} \int_{\mathbb{R}} \left(\frac{\Lambda(u)}{y}, \frac{u}{y} \right) + \frac{1}{2m} ||u||_{2}^{2} + \frac{1}{2m} \int_{\mathbb{R}}^{2} \frac{1}{2m} ||u||_{2}^{2} + \frac{1}{2m} \int_$$

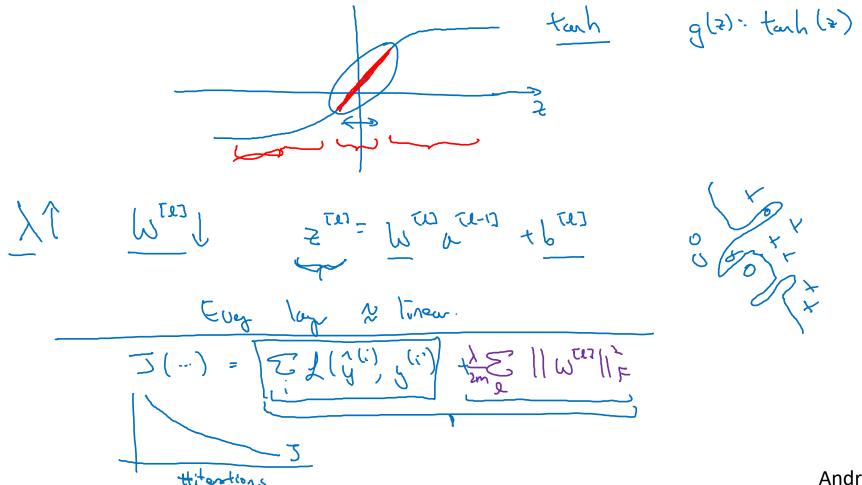

Regularizing your neural network

Why regularization reduces overfitting

How does regularization prevent overfitting?

How does regularization prevent overfitting?

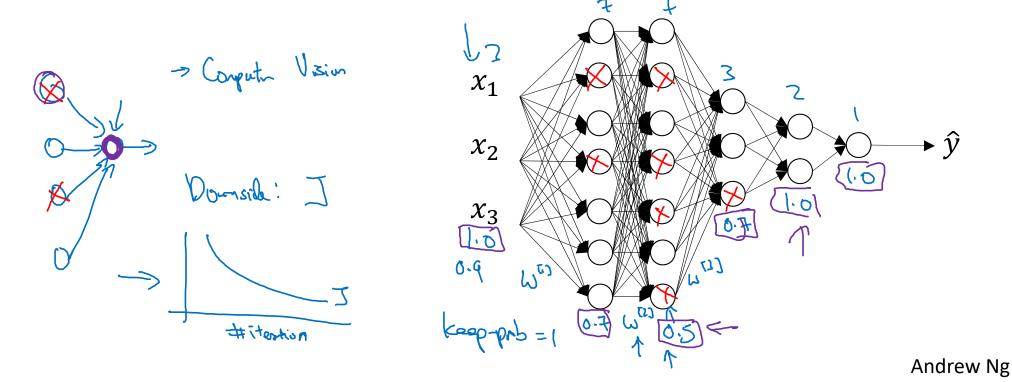

Regularizing your neural network

Understanding dropout

Why does drop-out work?

Intuition: Can't rely on any one feature, so have to spread out weights. Shrink weights.

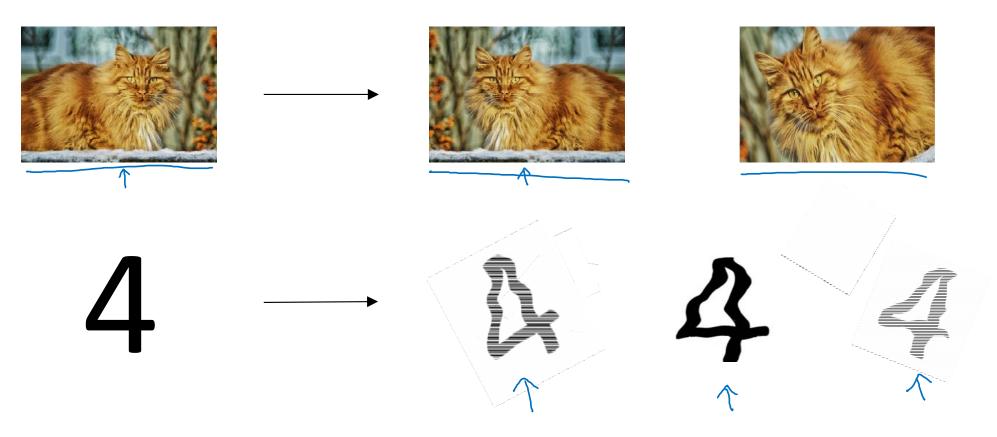

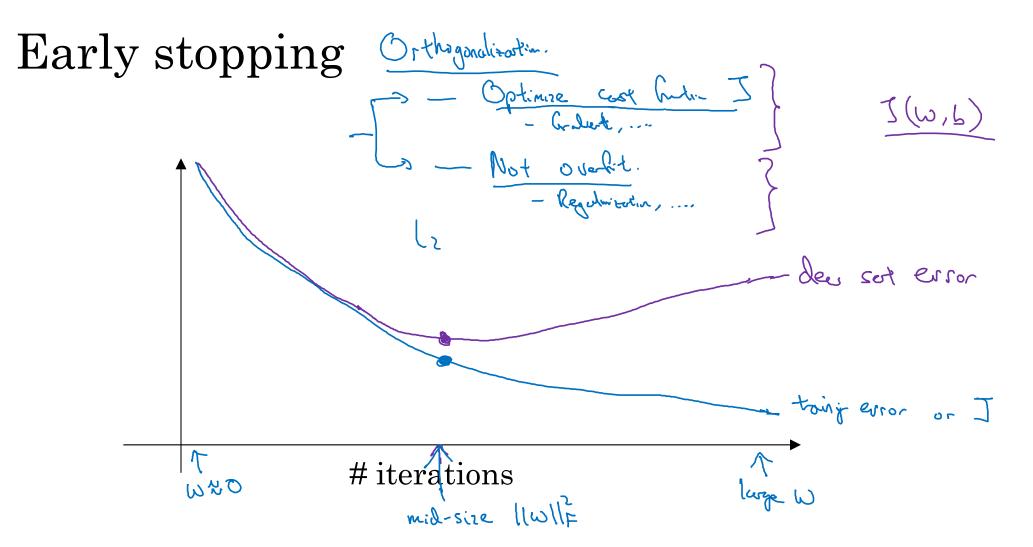

Regularizing your neural network

Other regularization methods

Data augmentation

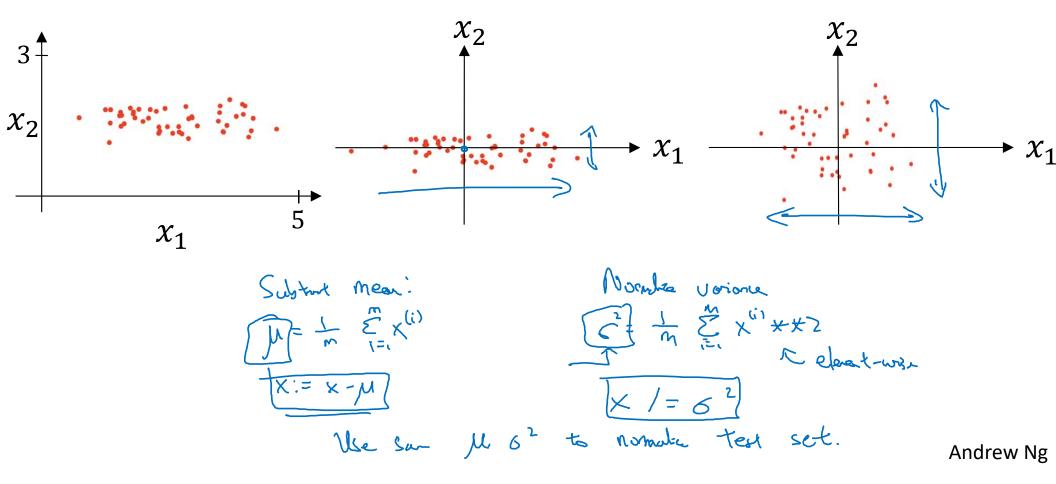

Setting up your optimization problem

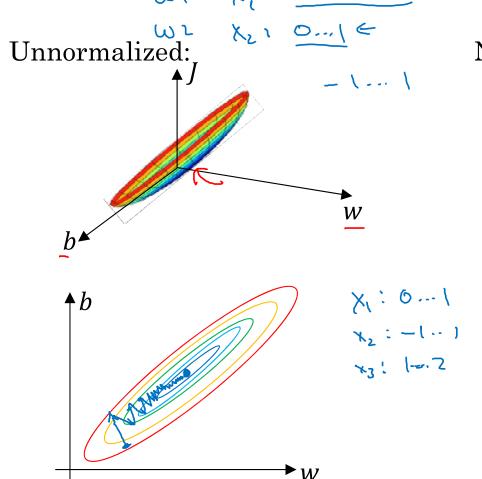

Normalizing inputs

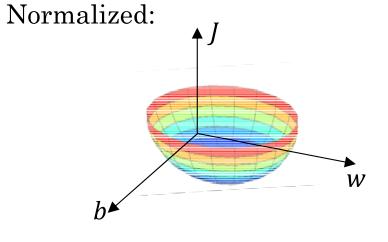

Normalizing training sets

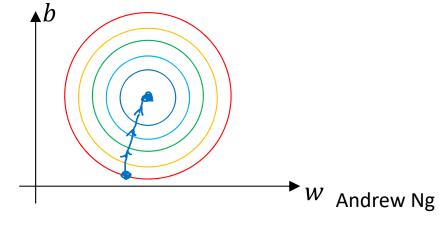

Why normalize inputs? $J(w,b) = \frac{1}{m} \sum_{i=1}^{m} \mathcal{L}(\hat{y}^{(i)}, y^{(i)})$

$$J(w,b) = \frac{1}{m} \sum_{i=1}^{m} \mathcal{L}(\hat{y}^{(i)}, y^{(i)})$$

Gradient Checking

Gradient check for a neural network

Take $W^{[1]}$, $b^{[1]}$, ..., $W^{[L]}$, $b^{[L]}$ and reshape into a big vector θ . $\mathcal{J}(\omega^{(1)}, b^{(1)}, \dots, \omega^{(L)}, b^{(L)})^2 = \mathcal{J}(\theta)$

Take $dW^{[1]}$, $db^{[1]}$, ..., $dW^{[L]}$, $db^{[L]}$ and reshape into a big vector $d\theta$.

Is do the gradet of I(0)?

Gradient checking (Grad check)

for each
$$\bar{c}$$
:

 $\Rightarrow \underline{100_{\text{opper}}} \, \bar{c} \, \bar{l} = \underline{100_{\text{opper}}} \, \bar{c} \, \bar{c} = \underline{100_{\text{opper}}} \, \bar{c} \, \bar{c} = \underline{100_{\text{opper}}} \, \bar{c} = \underline{100_{\text{op$

Setting up your optimization problem

Gradient Checking implementation notes

Gradient checking implementation notes

- Don't use in training — only to debug

- If algorithm fails grad check, look at components to try to identify bug.

- Remember regularization.

- Doesn't work with dropout.

- keep-pnb=1.0
- Run at random initialization; perhaps again after some training.
